

Flexo Labels

The Standard For Large Label Runs

Flexographic or flexo printing is excellent for high-speed production and overall quality. It is the label print method of choice for most of our label orders.

As a national label printer and converter, we maintain a fleet of state-of-the-art flexographic presses operated by experienced technicians – allowing us to finish very large label runs quickly and economically.

Versatile Printing Option

Our flexographic label presses can print up to 20” wide – allowing for large format labels. Flexo presses can also use a variety of inks including water-based, fluorescent, metallic, and UV-curable inks.

HD Flexo Print Quality

Our flexo presses utilize the latest HD plate making technology – for higher resolution and better print quality. By using HD Flexo Tecma LLC can provide smoother vignettes, sharper details and a wider color gamut than conventional plates.

In-House Prepress & HD Plate Making

Tecma LLC understands the importance of streamlining our print processes to provide better, more cost-effective solutions. We prepare all artwork and plates in-house, allowing us to maintain tight control over cost, quality and speed.

Affordable Die Cutting

No matter what shape label your customer needs, Tecma LLC can provide an affordable die cutting option. Tecma LLC is equipped with flexible semi-rotary magnetic dies. Utilizing our vast library of dies allows you to save money on die creation.
